GNU, Rpm, And Solaris Software Packages

Synopsis

This book covers GNU packages made with autoconf, automake, libtool, and pkg-config. It will take you from source code to installable package. If you've wanted to put your package on the web with a configure script like all the other packages you've downloaded, this book will tell you how to do that. The answer is to use autoconf, automake, and libtool, and perhaps pkg-config. This gives you a GNU-style package. Once you have your GNU-style package it's fairly easy to generate both a source code and binary RPM package--this book will show you that as well. Included are some basic scripts to help make the generation of the %files (explained inside) section of the spec file easier. This book will also show how to make a Solaris (System V) package. The book has over 100 tables, over 40 figures, and over 90 examples.

Book Information

Paperback: 596 pages

Publisher: BookSurge Publishing (April 14, 2009)

Language: English

ISBN-10: 1439233055

ISBN-13: 978-1439233054

Product Dimensions: 7.5 x 1.4 x 10.5 inches

Shipping Weight: 3.1 pounds (View shipping rates and policies)

Average Customer Review: 4.0 out of 5 starsÂ Â See all reviewsÂ (1 customer review)

Best Sellers Rank: #3,475,419 in Books (See Top 100 in Books) #70 inÂ Books > Computers & Technology > Operating Systems > Solaris

Customer Reviews

The author is very knowledgeable and to the point. It's super dry, to the point without any fluff.

Fantastic! Wish there was a kindle edition. Needs some whitespace trimming and layout adjustment.
