## Customer Reviews

I got this book for my 4-year-old son, who's a bit into astronomy, and he loves it! He's always asking me to read it to him. I know quite a bit is over his head, but that leaves room for him to learn quite a bit. This book is perfect for age 4-104. :)

My son brought this book home from school and it has great information in it and easy for an 8 year old to read.. Grandma picked it up and thought she needed this book and was going to run to Barnes and noble to pick it up.... I had to stop her and explain the benefits of wonderful .com. The

book came quickly and in great condition and for the best price ever..... great deal

The book is great for young kids. Big and full of pictures. I only had one problem. The book binding was torn. They said it was in good condition. More like fair condition. I am going to have to repair it. The seller did refund me and that made it better for the sale. I have two sons. Who like there father love Astronomy...

Bought this book a couple of years ago for my son's 8th birthday that loves anything about science, planets, and the universe. And now at the age of 10, he still reads it along with his other collection of books!

I bought this for my seven-year old son who is obsessed with The History Channel "Universe" DVD series. He loves the book because it beautifully covers all of the far out material found in that TV series. I highly recommend this for any young space enthusiast!

This is a beautifully written & illustrated book. It was purchased for a very precocious 8 year old, to accompany a telescope, given as a Christmas gift. This is a book that will be relevant for years & can be consulted by all ages. I was very impressed & am happy we chose it.

This book HELPS you LEARN about the universe. It's cool! My six year old son loves it VERY much.

My eight year old son enjoyed reading all the series including this one. It is part of his library collection, always excited to read (with some assistance) and share with his siblings.
