Our Stars

Synopsis

Scientists use telescopes and satellites to study the stars. But even though they're far away, stars are part of your world, too! Just lift up your eyes to see. Anne Rockwell explains the universe with bright pictures and simple text in a book that will delight any curious child's mind!

Book Information

ISBN-10: 0152163603

ISBN-13: 978-0152163600

Product Dimensions: 9 x 0.1 x 9 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Average Customer Review: 4.8 out of 5 starsÂ Â See all reviewsÂ (6 customer reviews)

Best Sellers Rank: #34,863 in Books (See Top 100 in Books) #26 inÂ Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy #629 inÂ Books > Children's Books > Early Learning > Basic Concepts #644 inÂ Books > Children's Books > Science, Nature & How It Works

Age Range: 4 - 7 years

Grade Level: Preschool - 3

Customer Reviews

Lovely book given to my 4 yr old as a birthday gift. Text reads: "When night comes, I can see billions of stars twinkling in the dark sky. The sun that shines in the daytime and keeps us warm is really a star. A star is made of fiery gas. It gives off brilliant light. Some stars are so far away that their fire has burned out by the time the brightness reaches us. Long ago, people imagined pictures in groups of stars and gave them names. These are called constellations. Constellations can tell us many things. When we see Orion the Hunter in the sky, we know it is the season to harvest what we planted. All year long, the Big Dipper points toward a star named Polaris. Polaris is also called the North Star. We always see Polaris in the northern sky. If you know which way north is, you can always find your way in the darkness. Sometimes before the stars come out, we can see a bright light dangling low on the horizon. It looks like a star, but it isn't. It is the planet Venus. Stars twinkle, but planets glow with steady light. When something in space goes around something else, it is in

orbit. Planets orbit around stars. Planets get their light from the star that shines on them. Earth where we live is a planet. Earth orbits around the sun. The sun and its planets make up our solar system. Moons orbit around planets. Some planets have many moons. Earth has just one. Our moon seems to change its shape each night, but it doesn't. It is always round. We just can't see all of it."... there are about 8 more pages to go, but I hope you get the idea and can judge the book for yourself.

I highly recommend this book. Anne Rockwell is a wonderful author. Her books make learning fun and interesting. My 5 year old son loves this book. We never get tired of reading it.

The students loved the illustrations!! Perfect for teaching constellations/ or concept. The stars are very easy for the children to follow. I recommend this book to all educators.
